

Number: 1

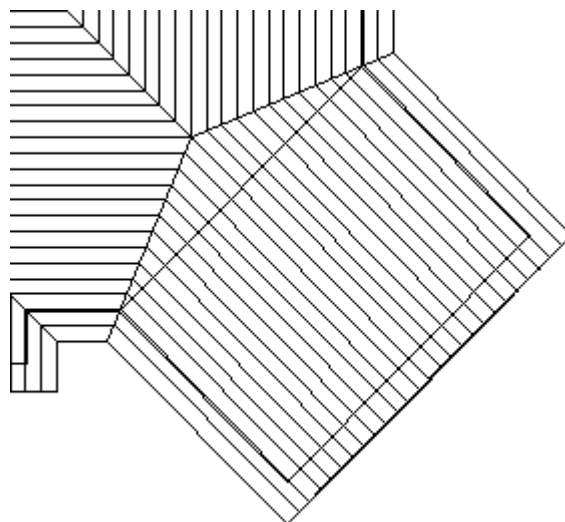

Objective: Create a verandah with cut out

**Commands used: Ins-Line
Verandah
Cut-out**

First of all draw the roof up as normal, ensuring that you track around the projected gable on the pergola.

From here select the **Mod-Roof | Advanced | Ins-Line | Free** command and draw a line from point **A** to point **B**.

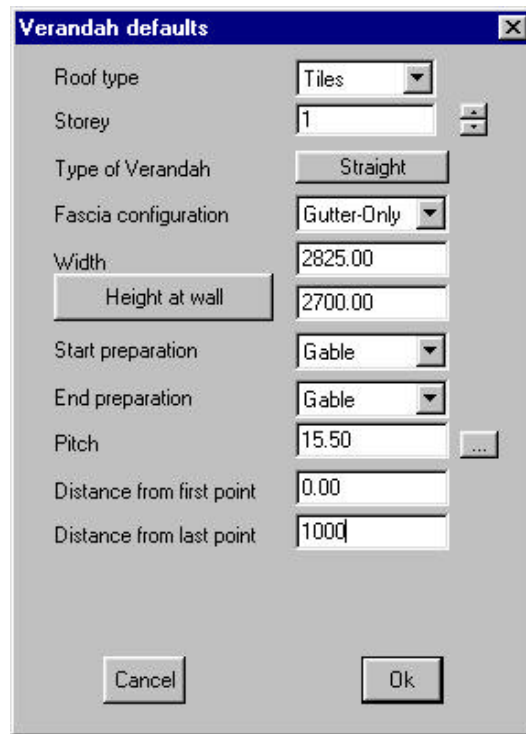

Next select the **Gen-Roof | Verandah | Simple** command and select the right wall, the newly drawn line followed by the 1105mm wall line. Set the defaults as shown on the following page.

From here you must delete the verandah set. To do this select **Delete**, followed by the verandah. Don't worry this won't delete the verandah, it will just allow you to manipulate it. Next select the **Mod-Roof | Advanced | Cut-out** command. Set the dialog box as below shown below.

This will bring up a constraints dialog box, just click **Ok**. Next "Snap" to point **A**, **B**, **C** and **D**, right click and then close straight. Click **No** when asked if you want to resize, followed by **Continue** when asked to select the planes. Select the part of the verandah that goes under the pergola and right click. Select **Yes** when asked to use this entity. The verandah will then be cut and your job is finished.
